

ANNOUNCEMENT TO THE AUSTRALIAN SECURITIES EXCHANGE: 31 JANUARY 2017

## DECEMBER 2016 QUARTERLY REPORT

WCP Resources Limited (“WCP” or “Company”) is pleased to present its December 2016 quarterly report. Highlights during and subsequent to the quarter were as follows:

- Completed review of previous exploration results at the Piedmont Lithium Project (“Project”) located in the Carolina Lithium Belt, a historic lithium producing region in North Carolina, USA
- The Project is located along trend from the historic Hallman-Beam and Kings Mountain lithium mines which provided a significant portion of the western world’s lithium between 1950 and 1990
- Assay results from 19 previously drilled core holes confirm thick zones high grade lithium in multiple spodumene-bearing pegmatites at shallow depths at the Project, including:

| Hole No. | Intercept (down hole)   | From Depth (down hole) |
|----------|---|------------------------|
| 09-BD-03 | 12.0m @ 1.18% Li <sub>2</sub> O<br>4.0m @ 1.26% Li <sub>2</sub> O | 29m<br>57m             |
| 09-BD-05 | 7.9m @ 1.33% Li <sub>2</sub> O<br>1.5m @ 2.17% Li <sub>2</sub> O  | 28m<br>85m             |
| 09-BD-06 | 13.0m @ 1.24% Li <sub>2</sub> O                                   | 43m                    |
| 09-BD-10 | 4.7m @ 1.54% Li <sub>2</sub> O                                    | 28m                    |
| 10-BD-14 | 6.0m @ 1.31% Li <sub>2</sub> O<br>8.0m @ 1.34% Li <sub>2</sub> O  | 81m<br>197m            |
| 10-BD-17 | 6.9m @ 1.42% Li <sub>2</sub> O<br>1.9m @ 2.83% Li <sub>2</sub> O  | 63m<br>72m             |
| 10-BD-18 | 5.5m @ 1.48% Li <sub>2</sub> O<br>5.4m @ 1.48% Li <sub>2</sub> O  | 44m<br>59m             |

- Commenced a phase 1 drilling program, comprising 10 holes, designed to strengthen the geological understanding of the lithium bearing spodumene pegmatites identified from historical exploration, with results due in the second quarter of 2017
- A subsequent phase 2 drilling program is planned to be conducted in the second quarter of 2017 which is expected to support the delineation of a maiden JORC Mineral Resource
- The Project’s unique proximity to downstream lithium infrastructure together with the growing U.S. demand for electric vehicle and battery storage markets, places WCP in a unique position to build a strategic U.S. domestic source of lithium production
- Continued to monitor the Company’s Yalgoo Gold Project located in Western Australia

## PIEDMONT LITHIUM PROJECT

The Piedmont Lithium Project (“**Project**”) comprises options over an initial core landholding of 415 contiguous acres within the historic Carolina Lithium Belt, also referred to as the Carolina Tin-Spodumene Belt (“**TSB**”), a historic lithium producing region located in North Carolina, United States.

*Figure 1: Project Location within the Carolina Tin-Spodumene Belt*

The TSB saw lithium exploration as early as the 1950’s which resulted in significant lithium discoveries (Hallman-Beam and Kings Mountain mines) that produced until the late 1990’s.

The Project is focused over an area that has been explored for lithium dating back to the 1950’s where it was originally explored by Lithium Corporation of America which was subsequently acquired by FMC Corporation. Most recently, North Arrow Minerals Inc. (“North Arrow”) explored the Project in 2009 and 2010, prior to North Arrow changing its focus to gold and base metal opportunities due to the significant fall in lithium price in 2010.

The Company has acquired North Arrow’s exploration data. North Arrow conducted surface sampling, field mapping, a ground magnetic survey and two diamond drilling programs for a total of 19 holes. Surface samples returned 16 of 18 samples (grab outcrop or float) with greater than 1%  $\text{Li}_2\text{O}$  and field mapping outlined over 37 spodumene-bearing pegmatite dikes.

### **Close Proximity to Existing Processing Plants**

Albemarle and FMC continue to operate two of the most important lithium processing facilities which are situated on these sites as a result of the rich deposits of lithium contained in the TSB. These facilities are now at the forefront of lithium research and development with FMC maintaining the Center for Lithium Energy Advanced Research (“CLEAR”) lab in Bessemer City, proximal to the Project. FMC’s Bessemer City lithium processing facility is approximately 14 kilometres from the Project whilst Albemarle’s Kings Mountain lithium processing facility is approximately 17 kilometres from the Project (Figure 2).

**Figure 2: FMC and Albemarle Lithium Processing Facilities**

The region is one of the premier localities in the world to be exploring for lithium pegmatites given its favourable geology and ideal location with easy access to infrastructure, power, R&D centres for lithium and battery storage, major high tech population centres and downstream lithium processing facilities. The Company is in a unique position to leverage its position as a first mover in restarting exploration in this historic lithium producing region with the aim of developing a strategic, U.S. domestic source of lithium to supply the increasing electric vehicle and battery storage markets.

**Previous Drilling Results**

The 2009 and 2010 diamond drilling programs undertaken by North Arrow consisted of 19 holes totalling 2,544 metres. North Arrow collected a total of 543 assay samples from 17 of the 19 holes, no assay samples were collected from two holes. The drill holes were designed to test spodumene-bearing pegmatites identified from surface geological mapping. Seventeen of the 19 holes intersected significant spodumene-bearing pegmatite, with the individual intercepts ranging in thickness from 1 to 13 metres (down-hole thickness). The pegmatite intercepts typically returned weighted assay results from 0.8% to 1.5% Li<sub>2</sub>O.

**Figure 3: Project Cross Section showing high frequency of Lithium Bearing Pegmatites**

Commonly multiple spodumene-bearing pegmatites are intersected within the drill holes. As an example, 8 individual mineralised pegmatites were intersected in Hole 10-BD-17. The interpreted cross-section for holes 10-BD-16, 17 and 18 (Figure 3) shows the stacked nature and steep to moderate easterly dip of the pegmatites.

Thick zones of high grade mineralisation have been recorded at shallow depths, with selected intercepts including:

| <b>Hole No.</b> | <b>Intercept (down hole)</b>                                      | <b>From Depth (down hole)</b> |
|-----------------|---|-------------------------------|
| 09-BD-03        | 12.0m @ 1.18% Li <sub>2</sub> O<br>4.0m @ 1.26% Li <sub>2</sub> O | 29m<br>57m                    |
| 09-BD-05        | 7.9m @ 1.33% Li <sub>2</sub> O<br>1.5m @ 2.17% Li <sub>2</sub> O  | 28m<br>85m                    |
| 09-BD-06        | 13.0m @ 1.24% Li <sub>2</sub> O                                   | 43m                           |
| 09-BD-10        | 4.7m @ 1.54% Li <sub>2</sub> O                                    | 28m                           |
| 10-BD-14        | 6.0m @ 1.31% Li <sub>2</sub> O<br>8.0m @ 1.34% Li <sub>2</sub> O  | 81m<br>197m                   |
| 10-BD-15        | 3.7m @ 1.29% Li <sub>2</sub> O<br>4.7m @ 1.40% Li <sub>2</sub> O  | 89m<br>181m                   |
| 10-BD-17        | 6.9m @ 1.42% Li <sub>2</sub> O<br>1.9m @ 2.83% Li <sub>2</sub> O  | 63m<br>72m                    |
| 10-BD-18        | 5.5m @ 1.48% Li <sub>2</sub> O<br>5.4m @ 1.48% Li <sub>2</sub> O  | 44m<br>59m                    |

The pegmatites predominantly trend northeast-southwest, and are hosted in an amphibole-biotite gneiss that rarely outcrops due to a deep weathering profile. Generally, the pegmatites intersected in drilling correlate well with the surface exposures observed in the geological mapping.

Spodumene mineralisation observed in the drill core ranges from crystals 1 millimetre to 10 centimetres in length. Occasionally crystals up to 30 centimetres in length have been observed in surface outcrop.

### **Current Drilling Program**

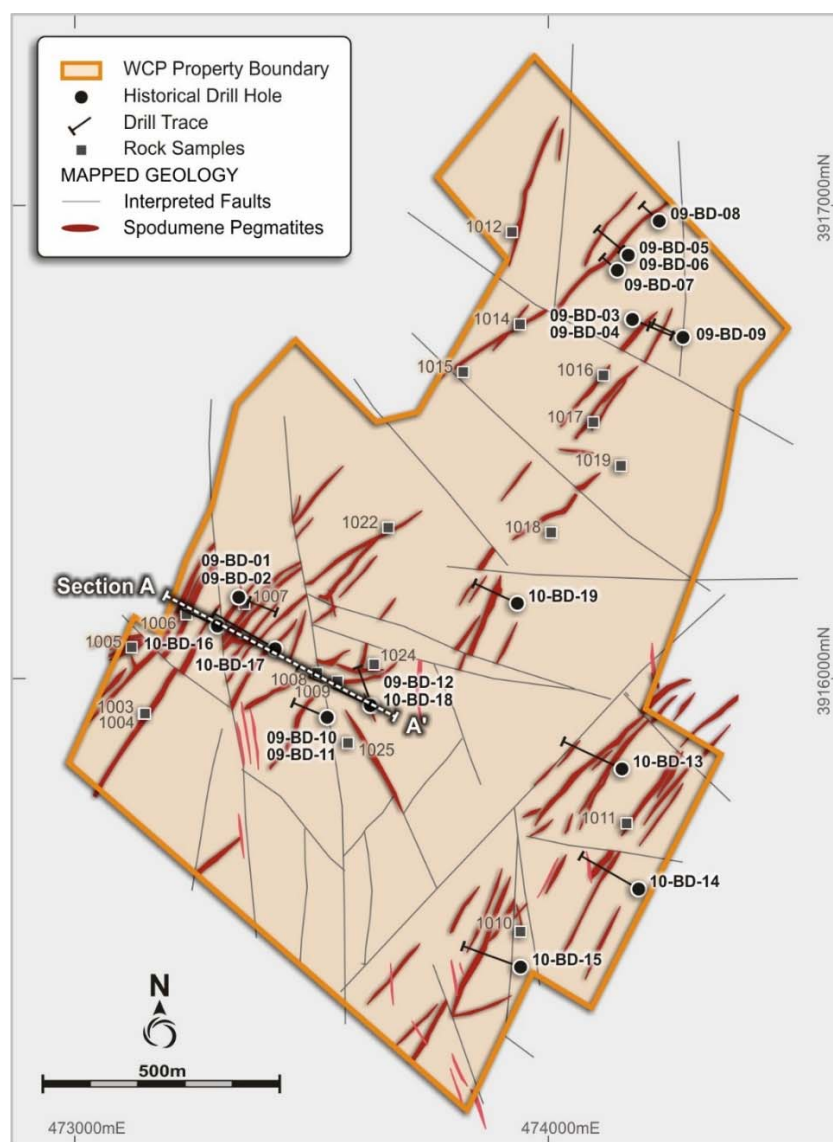

Subsequent to the end of the quarter, the Company commenced the first phase of a drilling campaign on the Project.

The drilling campaign will begin with a first phase consisting of 10 holes totalling 1,500 metres of drilling which will be designed to extend upon the understanding of the currently mapped and drilled pegmatites on the Project area.

The results of this first phase together with additional ground exploration and mapping work will continue to build upon the understanding of the lithium bearing geology of the Project.

The Company is confident of the ability to delineate further high grade intercepts in the first phase of the drilling campaign which will showcase the potential for the Project to become a leading US based developer of lithium raw material supply into the growing US domestic Electric Vehicle and Battery Storage markets.

Upon completion of the first phase, the new drilling results in conjunction with historic exploration data, will form the basis of the second phase drilling campaign which is expected to lead to the determination of a JORC / NI 43-101 compliant Mineral Resource at the Piedmont Lithium Project.

**Figure 4: Project Area showing Mapped Spodumene Pegmatites, Drill Holes and Rock Sample Locations**

### **TSB Geology**

Geologically, the Project lies in the Inner Piedmont belt adjacent to the Kings Mountain shear zone, which separates the Inner Piedmont belt from the Kings Mountain belt to the east.

The Inner Piedmont belt is typically characterized by Cambrian or Neoproterozoic gneisses, amphibolites, and schists of varying metamorphic grade (Gair, 1989). These rocks all lack primary structures and their relationships between one another is undetermined (Gair, 1989). Several major intrusions occur in the Inner Piedmont, including the nearby Mississippian-aged Cherryville granite (Kish, 1983). Concurrent dike events extend from the granite, mainly to the east, with a strike that is sub-parallel to the northeast trending Kings Mountain shear zone. As the dikes progressed further from their sources, they became increasingly enriched in incompatible elements including lithium. The enriched pegmatitic dikes are located within a 3.5 kilometres wide zone extending from the town of Kings Mountain through Lincolnton, this zone is known as the Carolina Tin-Spodumene Belt (Figure 1). The Project lies within the TSB.

## YALGOO GOLD PROJECT

The Yalgoo Project comprises a prospective tenement located in the Yalgoo Mineral Field in Western Australia and close to a number of important gold and base metal operations.

The Company completed a sampling program at the Yalgoo Project in 2011 that returned encouraging selective rock chip assays including: 9.36g/t Au, 9.98g/t Au, 25.1g/t Au and 60.4g/t Au. The results were returned from selective sampling of quartz veins hosted in Archean metamorphosed mafic intrusive rocks and from a north-south striking zone approximately 3 kilometres in length between the Kings Find and Nyngan historic workings.

After signing a Native Title agreement with the Badimia People and receiving Native Title clearance, the Company completed a scout style drilling program in 2013 which comprised of 42 holes for approximately 1,200 metres of drilling. The assay results did not return any significant intercepts.

## EXPLORATION INTERESTS

As at 31 December 2016, the Company has an interest in the following exploration projects:

| <b>Project Name</b>      | <b>Tenement Details</b>                | <b>Location</b>   | <b>Percentage Interest</b> | <b>Status</b> |
|--------------------------|--|-------------------|----------------------------|---------------|
| Piedmont Lithium Project | Mineral leases with private landowners | North Carolina    | -                          | Options       |
| Yalgoo Gold Project      | E59/1594                               | Western Australia | 100%                       | Granted       |

As at 31 December 2016, the Company has exclusive option agreements with private landowners in North Carolina, United States, which upon exercise, allows WCP to purchase (or long term lease) approximately 415 acres of surface property and the associated mineral rights from the private landowners.

### **Forward Looking Statements**

*This announcement may include forward-looking statements. These forward-looking statements are based on WCP's expectations and beliefs concerning future events. Forward looking statements are necessarily subject to risks, uncertainties and other factors, many of which are outside the control of WCP, which could cause actual results to differ materially from such statements. WCP makes no undertaking to subsequently update or revise the forward-looking statements made in this announcement, to reflect the circumstances or events after the date of that announcement.*

### **Competent Persons Statement – Piedmont Lithium Project**

*The information in this report that relates to Exploration Results, is extracted from the Company's ASX announcement dated 18 October 2016 entitled 'Previous Drilling Confirms High Grade Lithium Mineralisation' which is available to view on the Company's website at [www.wcpresources.com.au](http://www.wcpresources.com.au). The information in the original ASX Announcement that related to Exploration Results was based on, and fairly represents, information compiled by Mr Lamont Leatherman, a Competent Person who is a Registered Member of the 'Society for Mining, Metallurgy and Exploration', a 'Recognised Professional Organisation' (RPO). Mr Leatherman is a consultant to the Company. Mr Leatherman has sufficient experience that is relevant to the style of mineralization and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. The Company confirms that it is not aware of any new information or data that materially affects the information including in the original market announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.*

### **Competent Persons Statement – Yalgoo Gold Project**

*The information in this report that relates to Exploration Results, is extracted from the report entitled 'September 2015 Quarterly Report'. This report is available to view on [www.wcpresources.com.au](http://www.wcpresources.com.au). The information in the original ASX Announcement that related to Exploration Results was based on, and fairly represents, information compiled by Mr Peter Woodman, a Competent Person who is a member Australian Institute of Mining and Metallurgy. Mr Woodman was employed by WCP Resources Limited. Mr Woodman has sufficient experience that is relevant to the style of mineralization and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. The Company confirms that it is not aware of any new information or data that materially affects the information including in the original market announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.*

**Notes**

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
